

AutoPost AI Documentation

Last updated: September 4, 2025

1. Introduction

AutoPost AI is a WordPress plugin that helps you generate SEO-optimized blog content using ChatGPT and automatically insert relevant images from Pixabay. The plugin saves time, improves content quality, and streamlines your publishing workflow.

This guide explains how to install, configure, and use AutoPost AI.

2. Requirements

- WordPress 6.0 or higher
- PHP 7.4 or higher
- An OpenAI API key
- A WordPress user account with **Administrator** permissions

3. Installation

1. Download the plugin ZIP file.
2. In WordPress, go to **Plugins > Add New > Upload Plugin**.
3. Select the ZIP file and click **Install Now**.
4. Activate the plugin.
5. You'll now see **Posts > AutoPost AI** in your WordPress dashboard.

4. Quick Start Guide

1. **Enter your OpenAI API key**
 - Go to the **OpenAI/ChatGPT Settings** tab.
 - Paste your API key and click **Save Key**.
2. **Set your Pre-Prompt**
 - Define tone, goals, and brand voice in the pre-prompt field.
 - Click **Save Prompt**.
3. **Generate topics**
 - Navigate to **Generate Topics & Queue Posts**.
 - Select a category from the dropdown.
 - Click **Suggest Topics**.
 - Add chosen topics to your queue with the **Add** button.

4. Create posts

- Go to the **Post Creation** tab.
- Click **Create Now** for a queued topic.
- Posts are created with AI content and up to 6 images (5 in-content, 1 featured if available).

5. Features

- **AI Topic Suggestions:** Get tailored blog topic ideas from ChatGPT.
- **Post Queue:** Store selected topics in a queue for later use.
- **One-Click Post Creation:** Instantly generate a post for any queued topic.
- **Image Handling:**
 - Pulls up to 6 images from Pixabay.
 - Uses local placeholder images if fewer than 6 are found.
- **Post Scheduling:** Define “Post Creation Time Frame (days)” to spread out automated posts.
- **Post Status Control:** Choose Draft or Publish on creation.
- **Call-to-Action (CTA):** Add a custom footer CTA.
- **Hide Post Title:** Option to hide post titles for theme compatibility.
- **Email Notifications:** Get notified when posts are created via CRON.

6. Admin Screen Overview

Tabs

- **Generate Topics & Queue Posts:** Suggest, select, and save topics.
- **Post Creation:** Manage queue and view created posts.
- **Post Creation Settings:** Adjust scheduling, CTA, notifications, and title visibility.
- **OpenAI/ChatGPT Settings:** API key and pre-prompt.

Pro CTA Message

Directly under the admin page title:

Unlock AI-powered images, smarter scheduling, streamlined post approvals, and a premium user experience. Ready to take your content to the next level? Learn more
→ **GO PRO!**

7. Known Behaviors

- If a manual post creation returns a server error (500), the post is usually still created. The plugin now alerts the user with:
“Oops! There was a hiccup. The post was most likely created. Click OK to refresh and check.”
